

Association of British Scholars, Hyderabad

cordially invites
all British Scholars & UK Alumni
and distinguished members of
FTCCI, DOBARA, HMA etc.
to a thought provoking talk on

Artificial Intelligence: Past, Present & Future

by

Prof. T. Harinarayana

M.Sc (Tech), Ph.D., (IIT-ISM), Ph.D (UK)

Advisor, OTBI

Osmania University, Hyderabad

12th September, 2026 (Saturday)

Artificial Intelligence: Past, Present & Future

Prof. T. Harinarayana

M.Sc (Tech), Ph.D., (IIT-ISM), Ph.D (UK)

Advisor, OTBI

Osmania University, Hyderabad

**An Awareness popular talk for British Scholars, UK Alumni and also
for the Distinguished members of FTCCI, DOBARA, HMA etc.**

By

Association of British Scholars, Hyderabad

12th September, 2026

What Will You Take Away From This Talk?...

1. Introduction on AI
2. What is AI?
3. How and When 'AI' has started?
4. How AI has evolved?
5. How AI is developing in the present day scenario?
6. Practical examples of using AI on ...
 - a. Navigation
 - b. Education
 - c. Finance
 - d. Large data base
 - e) Groceries tracking
7. AI will do in the next 10 – 20 years, What can you do with AI
8. Expected Scenario of AI by many thinkers
9. Summary
10. Acknowledgements

5 Major Industrial Revolutions since 18th Century till Today

THE JOURNEY OF HUMAN PROGRESS: FROM INDUSTRIAL REVOLUTIONS TO AI REVOLUTION

1st INDUSTRIAL REVOLUTION

Mechanization

Late 18th Century
(1760s – 1840s)

Key Change:
Introduction of
mechanical production
powered by water
and steam

1760s

2nd INDUSTRIAL REVOLUTION

Mass Production

Late 19th Century
(1870s – 1910s)

Key Change:
Electricity powers
mass production
and assembly lines

1870s

3rd INDUSTRIAL REVOLUTION

Automation

Mid 20th Century
(1960s – 2000s)

Key Change:
Electronics, IT and
automation improve
efficiency and
productivity

1960s

4th INDUSTRIAL REVOLUTION

Digital Revolution

Early 21st Century
(2000s – 2020s)

Key Change:
Internet, digital
technologies and
connectivity transform
the world

2000s

NOW

AI REVOLUTION

The New Intelligence Era

Now and Beyond

Key Change:
Artificial Intelligence
enhances human potential
and solves complex global
challenges

Today & Beyond

From Machines to Intelligence – A Journey of Continuous Transformation

Every major Industrial revolution has created new jobs and industries. AI will do the same.

What is

AI

ARTIFICIAL INTELLIGENCE ??

What is Artificial Intelligence (AI)?

Artificial Intelligence (AI) is the ability of a computer or machine to do tasks that normally require human intelligence, such as understanding language, recognizing images, solving problems and making decisions.

In simple words:
AI learns from data,
thinks like a human,
and helps us do things
faster, better and smarter!

How Does AI Work?

AI learns from examples (data), finds patterns, and uses what it has learned to make predictions or decisions on new information.

1 Data

AI needs data to learn. This can be text, images, voice, numbers, etc.

Example: Photos of cats and dogs, or thousands of sentences in a language.

2 Learning

AI uses a special method called **Machine Learning** to find patterns in the data. It adjusts itself automatically based on the examples.

Example: It learns the features that make a cat different from a dog.

3 Trained Model

After learning from many examples, the AI creates a model (like a set of rules inside a computer) that it can use to make decisions.

The model is now ready to handle new, unseen data.

4 New Input

When you give new information, the AI uses its trained model to analyse it.

Example: You show a new picture of a cat to the AI.

5 Output

The AI gives a result — a prediction, decision or answer.

This is a cat!

The AI has identified the image based on what it learned.

Where is AI Used in Daily Life?

Voice assistants
(e.g., Siri, Alexa, Google Assistant)

Personalized recommendations
(e.g., YouTube, Netflix, Amazon)

Smart email filters
(e.g., spam detection)

Navigation and traffic updates

Healthcare
(disease detection)

Banking
(fraud detection)

Photo organization
(e.g., in your phone)

Why is AI Useful?

- ✓ Saves time
- ✓ Reduces human effort
- ✓ Handles large amounts of data
- ✓ Helps make better decisions
- ✓ Solves complex problems
- ✓ Can work 24/7

Things to Keep in Mind

- ⚠ AI is a tool, not a replacement for humans.
- ⚠ It learns from data, so it can make mistakes.
- ⚠ It should be used responsibly and ethically.
- ⚠ Human judgment, values and creativity are still very important.

AI is not magic. It is a powerful tool that learns from data to help us **create a better, smarter and brighter future!**

How and When did 'AI' has started?

Ans: 1956 – Birth of Artificial Intelligence
as a Field has started during
Dartmouth Conference, USA

The Turing Test

Can a machine think?

"The question is not
'Can machines think?'
but 'Can they behave as if they think?'"
– Alan Turing

Alan Turing
(1912 – 1954)

Mathematician | Logician
Visionary
Father of Modern AI

1 Setup

A human evaluator chats with two hidden entities through a computer (text only).

2 The Conversation

The evaluator asks any questions on any topic (e.g. facts, reasoning, common sense, humour, etc.).

3 The Challenge

The evaluator tries to figure out which one is the human and which one is the machine.

4 The Result

If the evaluator cannot reliably tell the difference and mistakes the machine for a human, the machine is said to have **passed the Turing Test**.

How the Turing Test Works

What it Tests

- Natural language understanding
- Reasoning and knowledge
- Ability to give human-like responses
- Does not test consciousness or true thinking

When is it Passed?

If the evaluator cannot consistently distinguish the machine from a human after the conversation, the machine is considered to have **passed the Turing Test**.

Why it is Important

- Simple and powerful idea proposed by Alan Turing in 1950.
- Shifted the focus from "can machines think?" to "can machines behave intelligently?"
- Still used as a benchmark in AI discussions today.

The Turing Test remains a milestone *in the history of Artificial Intelligence*, inspiring generations to build smarter and more human-like machines.

*A Question That
Still Inspires the Future*

The World of AI is FOR EVERYONE

Majority of our youth knows already what is AI.... But for all those who are new.....

What is Artificial Intelligence, (AI)?

In simple terms, **AI** enables computers/machines/robots to perform tasks that normally require large amount of time by humans or not possible by humans. Doctors, lawyers, teachers, researchers, businessmen, farmers, students and ordinary citizens can all use AI as a tool.

Why AI Matters?

- 🌐 AI is transforming every industry.
- 💡 It increases productivity, creativity, and innovation.
- 💼 AI is creating new jobs and business opportunities.

"AI is not replacing humans; humans using AI will replace humans not using AI."

How *AI* has evolved in the Past?

Early excitement, tough realities, and important lessons that shaped modern AI.

Real life is complex,
not always clear.

The Machine Learning Paradigm Shift (1990s – 2000s)

A new era where computers learned from data, not just followed hand-coded rules.

From rules
to data,
From programming
to learning!

1 The Shift

From hand-coded rules to data-driven probabilistic learning.

Earlier: Hand-coded Rules (Symbolic AI)

- Experts manually wrote rules.
- Worked well in simple, well-defined situations.
- Difficult to handle real-life complexity and ambiguity.

Now: Data-Driven Learning (Machine Learning)

- Instead of writing rules, we give many examples (data).
- The computer finds patterns and learns automatically.
- It uses probability to make decisions, even with uncertain or new data.

2 Key Algorithms

Several powerful algorithms emerged during this period.

Support Vector Machines (SVMs)

Finds the best boundary (hyperplane) to separate data into different groups.

Decision Trees

Makes decisions by asking a series of simple questions.

Random Forests

Combines many decision trees to make more accurate and robust predictions.

Naive Bayes

$$P(A|B) = \frac{P(B|A) P(A)}{P(B)}$$

- Uses probability to classify data.
- Based on a simple but powerful assumption (features are independent).
- Works well for text, spam filters, and many real-world applications.

3 Milestone Victory

IBM's Deep Blue defeats Garry Kasparov in 1997.

- IBM's Deep Blue used brute-force search (examining millions of possible moves) and customized heuristic evaluations.
- It defeated world chess champion Garry Kasparov in 1997.
- This showed that with sufficient computing power and advanced algorithms, machines could outperform humans in complex, well-defined tasks.
- It was a global milestone, proving the power of data, computation and intelligent search.

"The real breakthrough came when machines stopped being told what to do, and started learning from data."

Machine Learning opened the door to real-world AI applications and laid the foundation for today's deep learning revolution.

More data
Better algorithms
Brighter possibilities

How

AI

is developing in recent days ?

HOW IS **AI** DEVELOPING TODAY?

From Generative AI → Reasoning AI → AI Agents → Physical AI

AI is evolving rapidly from creating content to solving real-world problems and taking actions in the physical world.

Smarter AI for a brighter tomorrow

2026
and
Beyond

From
Ideas to
Impact

1

Generative AI

Creates text, images, audio, video and code.

You give a prompt and it creates new content.

Popular Tool

ALEXA

Voice assistant for everyday tasks

2

Multimodal AI

Understands and combines text, images, voice, video and documents.

It can see, hear, read and understand multiple types of data.

Popular Tool

ChatGPT

Understands and works with text, images, voice and more

3

Reasoning AI

Handles complex problems, planning, mathematics, science and coding.

It thinks step by step and gives logical answers.

Popular Tool

Google Gemini

Advanced reasoning for complex problems

4

AI Agents

Moves from answering questions to planning and completing multi-step tasks using tools.

It can plan, use tools, book, search, analyse and get work done autonomously.

Popular Tool

Microsoft Copilot

Your AI assistant that takes actions

5

Multi-Agent AI

Specialized AI agents collaborate on larger workflows and projects.

Many AI agents work together, each with a specific role.

Popular Tool

AutoGen

Framework for multi-agent collaboration

6

Physical AI

AI enters robots, drones, smart machines and real-world systems.

It interacts with the physical world and performs real tasks.

Popular Tool

Tesla Optimus

Humanoid robot for real-world applications

Greater capabilities across all fields

Higher productivity and better decision-making

A more innovative and sustainable future

AI today shapes a brighter tomorrow

AI IN EVERY SECTOR: TOOLS FOR A BETTER TOMORROW

Future

AI for a
Better Tomorrow

I am not only talking about AI.

My students at OTBI, Osmania University, are actually building solutions using AI for different problems.

These examples should provide you with better understanding on present day developments in AI

Practical examples of using **AI** by my students are as follows:

- a. Navigation Platform** (Aditya, Ms. Bhodini)
- b. Education & Research**(Ghayas, Varun Kumar)
(Sulabha Vidya)
- c. Finance-Bank Hub** (Ms.Mahi, Ms.Satvika)
- d. Large Database**
(Maneesh, Eswar, Ms.Thanuja)
- e. Food tracking** (Ujjwal, Ms.Yuvana, Ms.Tanvi)
(Aaharika)

a. Navigation

Problem

- Searching and reaching places is an issue, especially in large campuses, pilgrimage centres, Zoos, Large malls etc...
- Google map is good, but not very good in some places due to lack of accessibility of data on its location.

Solution

- At OTBI, Osmania University, we solved this issue with easy Navigation using Google Maps itself and also added a few features using **AI** technology.

Scan the QR Code For Navigation & Information in Srisailam Temple Area

SRISAILAM MALLIKARJUNA SWAMY TEMPLE

Srisailam Temple is one of the twelve Jyotirlingas of Lord Shiva, located on the Nallamala Hills by the Krishna River. The main deity Mallikarjuna Swamy is worshipped with Goddess Bhramaramba Devi, a Shakti Peetha.

Get directions to temples, ghats, amenities, and services.

Project executed by:
OTBI, Osmania University, Hyderabad
in association with
M/s Tchetty Software Pvt.Ltd.

b.Sulabha Vidya

(Distraction Free Education)

Problem

- We observed students are getting deviated to other platforms while reading books and searching for information etc.

Solution

- We found an innovative Solution using **AI**
- Our platform will provide meanings of technical words, images and videos in our platform itself without leaving the reading of the text booksn (in pdf format).

Class 9

Class 10

We share this planet with millions of living beings, starting from micro-organisms and bacteria, lichens to banyan trees, elephants and blue whales. This habitat that we live in has immense biodiversity.

bacteria

DEFINITION

WIKIPEDIA

VIDEOS

Bacteria are ubiquitous, mostly free-living organisms often consisting of one biological cell. They constitute a large domain of prokaryotic microorganisms. Typically a few micrometres in length, bacteria were among the first life forms to appear on Earth, and are present in most of its habitats. Bacteria inhabit the air, soil, water, acidic hot springs, radioactive waste, and the deep biosphere of Earth's crust. Bacteria are also found in extreme environments such as high pressure, high temperature, and high salinity.

c. Finance – Bank Hub

Problem

- In India, there are 50+ recognised Banks and some Banks have 1 or 2 websites and 2 or 3 Apps.
- Customers having accounts in different Banks are facing problems
- Customers are finding difficult on various loan schemes offered by different Banks.

Solution

- My intern students made one platform through which they can open any secured website of the Bank and compare interest rates and also helps customers to fill the forms online.

ONE PLATFORM FOR SMARTER BANKING SERVICES

Access banking services, complete forms with AI guidance,
compare financial products, and explore government services —
all in one platform.

- Access All Major Banks
- AI-Guided Form Filling
- Generate & Download Banking Documents
- Works in 10+ Languages

Official Links.
Safe Access.
Trusted Services.

d. Large Data base –

Problem

OPEN DATA HUB

- In India, large data base exists in different public domains and platforms
- Search and analyse data is a major problem.
- Every student/researcher needs data for processing with innovative ideas.

Solution

- My students using **AI technology** made the data easily accessible and also analyse it quickly to save their time.

UNIFIED OPEN DATA HUB

INDIA FOCUSED

One Platform. All Open Data. Limitless Possibilities.

A centralized platform to search, preview, download,
and track Indian open datasets across multiple domains.

POWERFUL FEATURES

e. Food, Groceries, medicines Tracking (Aaharika)

Problem

- Every household needs kitchen management, we need to control Groceries, vegetables and also medicines.
- They find it difficult to track the quantity of groceries, vegetables and also medicines in their house.

Solution

- My students using **AI**, found a solution to alert on the expiry of the groceries, or quantity left out in the kitchen based on the items cooked and also helps to prepare the food through recipe suggestions.

AAHARIKA

your **ai-powered** pantry companion.

 Smarter groceries.
  Healthier meals.
  Less food waste.

BEFORE

- Forgetting items
- Food expires unnoticed
- Unplanned purchases
- No idea what to cook

AFTER

- AI tracks your pantry
- Timely expiry alerts
- Smart shopping made simple
- Personalized recipe suggestions

PANTRY MANAGEMENT
Add, update & organize your pantry items with ease.

AI RECIPE SUGGESTIONS
Discover tasty recipes based on what's in your pantry.

SMART SHOPPING LIST
Auto-generate lists & shop smarter, never forget an item again.

SCAN TO EXPLORE
AAHARIKA

YOUR SMART PANTRY STARTS HERE!

GROCERY SCANNER
Scan barcodes to instantly add items to your pantry.

ADD MEDICINES EXPIRY REMINDER
Get timely reminders before your medicines expire.

MEDICINE EXPIRY AND INSIGHTS
Track medicine expiry and get smart insights to stay safe.

AI

and

Other Technologies in the Future

In our Society every sector will be transformed in the coming years...

Let us imagine three ordinary situations:

1. a patient
2. a citizen seeking justice
3. a student learning.

Better
Diagnosis
Better Treatment
Brighter Lives

From Guesswork to Precision

Genetic Sequencing + AI + Quantum Computing

A Healthier Tomorrow for Everyone

Science
for People
A Healthier
Tomorrow

Today's Medical Scenario

Many patients suffer due to late, limited and trial-and-error care

Late Diagnosis

Diseases often detected at advanced stages

Trial-and-Error Treatment

Same drugs for many people.
May not work for everyone

Side Effects

Unnecessary medications
can cause harm

Chronic Suffering

Patients with cancer, rare
diseases and genetic disorders
often have limited options

High Cost

Repeated tests, hospital visits
and long-term treatment

Emotional Stress

Pain, anxiety and uncertainty
for patients and families

Every patient is unique,
but today's medicine often treats everyone the same.

Genetic Sequencing + AI + Quantum Computing

A powerful combination
that understands you better

Personalized & Faster Cure

Right Treatment. Right Patient. Right Time.

Early and Accurate Diagnosis

Detects risks before symptoms appear

Personalized Treatment

Right drug, right dose for your genes

Faster Drug Discovery

Quantum computing + AI
finds new medicines quickly

Fewer Side Effects

Treatments are better matched
to your body

Better Outcomes

Higher chance of cure and
longer, healthier life

Hope for Rare and Genetic Diseases

New possibilities for conditions
that were hard to treat

Healthier People
Happier Families
Stronger Societies

From treating diseases to preventing them.
From one-size-fits-all to care made for you.

Genomic Medicine
Understand your genes

AI Analytics
Smarter decisions

Quantum Power
Faster solutions

Better Health
For a brighter future

Science, Technology
and Compassion
for a Healthier World

Timely
Justice
Stronger
Society

JUSTICE & AI:

From Court Backlog to Faster Justice

Leveraging Technology for a Fairer, Faster and More Accessible Justice System

People
Technology
Justice for a
Better India

TODAY'S PROBLEM

Growing Backlog, Delays and Challenges

~5.1 CRORE
pending cases

across all courts
(civil + criminal)

~9%

> 10 years old
(pending for more
than 10 years)

High Courts: ~6.49 million pending cases

District & Taluka Courts: ~52.57 million pending cases
(NJDG/eCourts: current snapshot)

Huge case backlog

Repeated adjournments & delays

Time-consuming document review

Difficulty finding relevant precedents

Language & transcription barriers

AI CAN HELP NOW

Practical Solutions Already Available

Search & summarize case files

Quickly find key information from large documents

Find relevant judgments / precedents

AI-powered legal search and similarity matching

Speech-to-text & translation

Convert court proceedings to text and translate into multiple languages

Draft routine documents

Generate drafts (e.g., notices, orders, templates)

Smart cause-list & scheduling support

Help reduce adjournments and optimize listings

Identify missing/duplicate documents

Check completeness and flag inconsistencies

AI ASSISTS — HUMAN JUDGE DECIDES

Augmenting human expertise, not replacing it.

FUTURE AI-ASSISTED COURTS

Smarter Systems for a More Efficient Judiciary

Predict likely delays & bottlenecks

Use data analytics to forecast case timelines

Prioritize urgent/ageing cases

Ensure older and sensitive cases get timely attention

Automated case-flow management

End-to-end digital workflow, fewer adjournments

Real-time multilingual court records

Seamless speech-to-text, translation and access

Early dispute resolution & mediation support

AI tools to help explore settlement options

Decision-support with explainable evidence links

Provide insights, not decisions, with transparent reasoning

NO AI REPLACEMENT OF JUDICIAL INDEPENDENCE

Final decisions will always be made by human judges.

GOAL: FASTER • FAIRER • MORE ACCESSIBLE JUSTICE

TECHNOLOGY SHOULD SUPPORT, NOT REPLACE, JUDICIAL JUDGMENT.

Sources: National Judicial Data Grid (NJDG) and eCourts; figures are dynamic.
Government of India / Supreme Court materials on AI-enabled courts.

Today's
Computing
Powers
the World ...

From Bits to Qubits

Two different worlds. A brighter future together.

*Different
Approach
Bigger Possibilities*

Normal (Classical) Computing

The technology we use every day

Basic unit
Bit

0 or 1

A bit is either 0 or 1

How it works

Uses classical logic and
binary arithmetic

Hardware

CPUs, GPUs, memory,
transistors

Environment

Works at normal room temperature

Strength

Excellent for everyday computing
and a wide range of applications

Examples

Laptops, smartphones,
servers, cloud computers

Current maturity

Highly mature and
widely available

Quantum Computing

A new way of processing information

Basic unit
Qubit

Can be 0 and 1
at the same time
(superposition)

A qubit can represent a combination of 0 and 1

How it works

Uses quantum mechanics
and quantum gates

Hardware

Superconducting circuits,
trapped ions, photons, etc.

Environment

Often needs extremely low
temperatures and controlled conditions

Key quantum principles

Superposition

Qubit can be in multiple states
at the same time.

Entanglement

Qubits can be strongly correlated
even when far apart.

Interference

Helps increase the likelihood
of correct answers.

Strength

Can solve certain complex problems
much faster than classical computers

Examples

IBM Quantum, Google Quantum,
Quantinuum systems

Current maturity

Still an emerging technology

Where Quantum Computing Can Make a Big Difference

**Drug & Materials
Discovery**

Design new medicines
and materials

Cleaner Energy

Better batteries,
solar materials
and catalysts

Cybersecurity

Stronger encryption
and new security
methods

**Chemical
Simulations**

Understand molecules
and reactions

**Logistics &
Optimisation**

Smarter transport,
supply chains and
resource planning

Finance

Advanced risk analysis
and modelling

**AI & Machine
Learning**

New possibilities
in AI

**Climate & Earth
Systems**

Better models for
a sustainable future

Technology
for a Better
Tomorrow

Not a Replacement – A Powerful Partner

Classical and Quantum computers will work together to solve the world's biggest challenges.

*New Ideas
A Brighter Tomorrow*

AI GROWTH vs. REAL-WORLD APPLICATIONS

THE GAP IS YOUR OPPORTUNITY!

AI CAN SOLVE REAL-WORLD CHALLENGES

HEALTHCARE

Early diagnosis, drug discovery, personalized care

EDUCATION

Personalized learning, intelligent tutoring, accessibility

ENVIRONMENT

Climate modeling, pollution monitoring, conservation

AGRICULTURE

Crop prediction, precision farming, food security

SMART CITIES

Traffic optimization, energy management, public safety

SOCIAL GOOD

Poverty reduction, disaster response, inclusive society

STUDENTS: YOU CAN BRIDGE THIS GAP!

Use AI tools. Think Innovatively. Solve Real Problems. Create Real Impact.

YOUR IDEAS + AI = A BETTER FUTURE FOR ALL!

Recent Media Coverage about Future of AI - Two Examples

**Elon Musk on AI:
humans will no
longer be in
control of AI in ten
years (2036)**

My Message to the Society is.....

In the History, a few people have created fear complex in our Society....

- During Millenium (2000-Y2K)**
- Computerization of Banking sector**
- 19th Century Industrial Revolution & The Luddite Movement etc..**

Never Fear for “New Technology”

Changes are continuous process...

**USE THE TECHNOLOGY WITH MORALS
FOLLOWING ETHICAL CODE..**

Summary

Historically, Science and Technology has been changing with time and new methodologies, new machinery are invented and made available to the Society. This has happened in the past, happening now and will continue to happen in the Future as well.

No one can stop these changes...

AI is just one such example...

How best we can use and control lies in our own Hands.... !!!!

ACKNOWLEDGEMENTS

**I am grateful to the President,
Secretary and the entire Executive
committee members of the
Association of British Scholars,
Hyderabad Chapter
for this invitation**

**Thank you all for your
Patient Hearing**
